

Methylene Chloride Free Stripper

205G

DESCRIPTION

210G is a thickened non-chlorinated stripper formulated to provide effective removal of cured paints, epoxies and urethane materials. The viscosity of this product has been increased to provide better retention on vertical or uneven surfaces.

FEATURES

- Non-chlorinated
- Pleasant citrus scent
- Low volatility

HOW TO USE

210G is used as received. It can be applied by brush, roller or spray to floors, walls, ceilings or different types of molds. The viscosity will allow the chemical to stay in contact with the coating for an extended period of time. Depending upon the type of material being removed, the thickness of the material and the application temperatures, removal time will vary.

If, when checking on the status of removal, the stripper is still evident and the material is not yet removed, allow more dwell time. If the stripper seems to have soaked into the material, then remove as much material as possible by scraping, wiping or water rinse and, when dry of residual water, apply another coat of stripper.

Prior to use, test the compatibility of the surface or part being stripped to make sure that the chemical does not also attack it.

SPECIFICATIONS

Physical Form	Thick liquid
Color	clear
Odor	citrus
Flash Point (TCC)	111°F (minimum)
