

Methylene Chloride Free Stripper 205L

DESCRIPTION

210L is a non-chlorinated stripper formulated to provide effective removal of cured paints, epoxies and urethane materials.

FEATURES

- Non-chlorinated
- Pleasant citrus scent
- Low volatility

HOW TO USE

210L is used as received. It can be applied by brush, roller or spray to floors, walls, ceilings or different types of molds. Depending upon the type of material being removed, the thickness of the material and the application temperatures, removal time will vary.

If, when checking on the status of removal, the stripper is still evident and the material is not yet removed, allow more dwell time. If the stripper seems to have soaked into the material, then remove as much material as possible by scraping, wiping or water rinse and, when dry of residual water, apply another coat of stripper.

Prior to use, test the compatibility of the surface or part being stripped to make sure that the chemical does not also attack it.

SPECIFICATIONS

Physical Form	liquid
Color	clear
Odor	citrus
Flash Point (TCC)	111°F (minimum)
